U. S. Patent and Trademark Office PTO-326 (Rev. 9-97)

Part of Paper No.

Art Unit: 3652

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In line 15, it is not clear what is meant by "support portions" or what limitations such a recitation sets forth, and in line 17, it is not clear if the term "respectively" is meant to imply that there are first and second support portions.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 21 is rejected under 35 U.S.C. 102(b) as being anticipated by Litsey (US 723,692, cited by applicant).

Litsey shows a lift dolly with first and second platforms C adapted to be fixed to first and second portions g of an object to be lifted, the platforms being "selectively coupleable" and "operatively associated with one another" such that pressure on treadle portion h of one platform

Application/Control Number: 09/361189 Page 3

Art Unit: 3652

. . . . .

causes the object to be lifted to a raised position, and are also "operatively associated ... to enable lowering of the object from the raised position by applying pressure" to the treadle portion of the platform, as broadly claimed, since doing so would take pressure off the latch mechanism n and thus make it easier to release lever j, even though this is not a required action. Litsey also shows "support portions ... at least partially directly above" wheels of the platform, as best understood, and to whatever extent this is considered a positive limitation. It is noted that an anticipatory reference need only show the positively claimed structural limitations and be capable of performing the functional recitations without modification, and Litsey is believed to do so.

5. Claim 21 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Heizer, Jr (US 3,845,933, cited by applicant).

This reference is similar in operation to Litsey as set forth above, shows all positively claimed limitations, and is also considered to be capable of performing the functional recitations without modification.

6. Claim 21 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Winkler et al (US 2,937,850, cited by applicant).

Again, this reference shows all structural limitations and is capable of performing the functional recitations set forth.

Application/Control Number: 09/361189

Page 4

Art Unit: 3652

7. The prior art not relied upon is considered pertinent to applicant's disclosure.

Peterson et al and Yoshikawa, both cited by applicant, show retractable wheels which can be raised to lift an object by applying pressure to a pedal and can also be lowered to enable lowering of the object by applying pressure to the pedal.

Any inquiry concerning this communication or earlier communications from the examiner 8. should be directed to James Keenan whose telephone number is (703) 308-2559.
